Ringkasan profesional

My name is Muhammad Renaldy Rahadiansyah, a Game Developer with experience using various tools and technologies to support game development. I work with C#, Lua, JavaScript, HTML/CSS, and GLSL, and use engines such as Unity, Unreal Engine, Godot, and Roblox Studio to create interactive systems. I also use Blender for 3D asset creation and tools like Aseprite, Inkscape, and Krita for 2D design, while currently learning Affinity to improve my workflow. Through these tools, I aim to build reliable solutions, improve development processes, and collaborate effectively within a team.

Pengalaman kerja

Roblox Game Developer

Satu Visi Digital | Jakarta

Juli 2026 hingga September 2026

- **UI & Frontend Development:** Engineered modular, responsive front-end UI systems across mobile and desktop Roblox clients, structuring HUDs, shop interfaces, and inventory layouts using Roact/Fusion frameworks for maximum layout adaptivity.
- **UI Logic & Tween Animations:** Scripted client-side interface state machines and rich visual transitions via TweenService, integrating dynamic popups, interactive upgrade menus, and sound-cued HUD alerts to enhance UX feedback loops.
- **Branded Experience Delivery (Paddle Pop):** Optimized gameplay loops, bug-fixed client-server bottlenecks, and finalized production builds to successfully launch a branded promotional game for Paddle Pop, driving player retention and smooth cross-platform performance.
- **Dynamic Weather System:** Developed an environmental controller managing dynamic day-night cycles, volumetric lighting transitions, atmospheric effects, and server-replicated weather conditions (rain, storms, clear skies) with zero frame-drop impact.
- **Alien Event & Cinematic Sequences:** Programmed scripted world event sequences featuring an alien encounter, orchestrating synchronized camera choreography via CurrentCamera manipulation, lighting shifts, sound cues, and multi-actor cutscene timings.
- **Character Animation Implementation:** Integrated character animation controllers and state blenders, implementing custom rigs, action-triggered KeyframeSequences, and emote loops using the Animator API to deliver fluid avatar interactions.

Game Programmer

GU Studio | Bandung

September 2025 hingga Mei 2026

- Developed a Roblox game titled "Fish Life", featuring interactive aquatic environments, custom NPC behaviors, and engaging core gameplay mechanics.
- Built and scripted NPC systems, enabling dynamic interactions and AI-driven behaviors that enhanced player immersion.
- Designed and implemented gameplay mechanics for a sushi restaurant tycoon game, including progression systems, resource management, and player reward loops.
- Created and optimized core game systems such as automation, player interactions, task management, and in-game economy mechanics.
- Developed monetization and progression systems for a ski-themed brainrot tycoon game, including premium purchases, VIP features, upgrade systems, and scalable reward mechanics.

- Implemented monetization features such as game passes, premium upgrades, VIP benefits, and dynamic income multipliers, including a feature that generates 120% of the player's highest-income asset.
- Contributed to tycoon gameplay systems including slot management, upgrade progression, automated income generation, and economy balancing.
- Optimized gameplay systems and scripting architecture to support scalability, maintainability, and performance across Roblox experiences.
- Collaborated with designers, artists, and developers to transform game concepts into polished and engaging player experiences.

Game Programmer

Faswork ID | Remote

Juli 2024 hingga Januari 2026

- Successfully completed 10+ game development projects for various clients.
- Proficient in Unity, Unreal Engine, and Godot for game development.
- Created 3D assets using Blender and 2D assets with Aseprite & Illustrator.
- Designed and implemented gameplay mechanics, AI systems, and multiplayer networking.
- Collaborated with clients to transform ideas into functional and engaging games.
- Delivered high-quality projects within deadlines while maintaining strong communication with stakeholders.
- Continuously learning and adapting to new technologies and industry trends.
- Developed a VR experience for an events company, enhancing interactive engagement and immersive user experiences.

Programmer

Datacaraka Solusindo | Jakarta

Mei 2024 hingga Juli 2024

- Developed a Calculator and Form using JavaScript to enhance user interactivity and functionality.
- Designed and implemented Form pages with backend integration, utilizing ASP.NET Core and DevExpress Framework for seamless data management.
- Connected Form pages to SQL Server, ensuring efficient data storage and retrieval.

Customer Engineer

NawaData Solution | Jakarta

Agustus 2023 hingga Februari 2024

- Iteratively tested and refined SQL code then compared and matched processed data from User Acceptance Testing (UAT) with user-provided data until the outputs aligned, resulting in data that passed validation and was utilized

by users for their reports.

- Managed System Integration Testing (SIT) and User Acceptance Testing (UAT), employing smoke and usability testing methods, which yielded positive results and enhanced user interaction with the application.
- Acquired comprehensive knowledge in finance, accounting, and banking regulations, broadening my expertise in financial management and compliance.

Technical Artist

Agate International | Bandung

Agustus 2022 hingga Februari 2023

- Developed environment components using shaders and deepened my understanding of the graphics pipeline, resulting in highly appreciated work that was incorporated into the game.
- Optimized the game's graphics performance, ensuring it runs at over 60 fps on mid-end Android devices, significantly enhancing player experience.
- Created, tested, and implemented a CI/CD pipeline for automated testing in the alpha stage, employed versioning for the app, and established a robust testing environment, leading to numerous findings that provided valuable insights for optimization.
- Conducted real-time stress testing by overloading the game with obstacles and units, and performed destructive testing to explore the limits of player actions, conclusively demonstrating the game's capability to run smoothly on mid-range phones

Programmer

Miracle Gates Entertainment | Yogyakarta

Maret 2022 hingga Juni 2022

- Revitalized several games, including "Merge Master," "Spray Can," "Bowling," "Lighter," and "Siren," through reskinning, leading to the app receiving widespread acclaim.
- Crafted environment and visual effects for a company game, have good appreciation for my contributions despite them not being included in the final product.
- Acquired expertise in mobile game advertising systems, SEO, Google Ads, and Unity Ads, significantly enhancing our marketing strategy and user acquisition efforts.

Game Programmer

Extralife Entertainment | Tangerang

Juni 2021 hingga Desember 2021

- Creating story and mechanic for visual novel using Whimsical and Unity based on team ideas according to company vision.
- Spearheaded the development and launch of a visual novel on itch.io, drawing upon six months of dedicated effort to deliver a high-quality game available for free.
- Successfully deconstructed three casual games, providing critical insights that the company utilized as a foundation for developing their own games.
